

CSS Navigation

Assignment #7

For this assignment, students are to create a vertical navigation bar (menu) for navigating their Web site. Navigation bars are required on every page, except the links page. The site is to include the home page (default.html), a family page, and a special interest page, in addition to the links and sample pages.

CSS Menu

The menu is to be coded in the CSS external style sheet, 255.css. Four styles will be required: main, link, hover and break. The menus are to complement the colors and text created in assignment five. The menus are to create a rollover effect with a hover style.

Pages

The new family and special interest pages are to include a page title and headline like the home page. The menus are to be placed in the same location on each page with buttons to all the pages in the site. In a future assignment, the special interest page will include information about a subject of interest to the student. This page may be referred to with name of the subject or as special interest.

Evaluation	Points Possible	Points Received
1. CSS Styles		
Main	4	_____
Link	4	_____
Hover	4	_____
Break	4	_____
2. Menus		
Home, Family, Special, & Sample	4	_____
Colors	4	_____
Text	4	_____
Buttons for Each Page	4	_____
Rollover Effect	4	_____
Page Titles	2	_____
Page Headlines	2	_____
Total	40	_____
